

CUSTOMER CASE STUDY – NON PROFIT

The Customer | BIOS is a Swindon based youth work project established in 2010, which meets young people 'where they're at'. They are committed to positively changing the lives of young people living in the Swindon area. They work with teenagers to help them address the issues in their lives, and enable them to make positive life choices.

The Challenge | BIOS had built a Mobile Youth Club out of a converted delivery van. The van is equipped with 4G internet access, and they were looking for a solution for installing kiosk style iPads on the outer portion of the vehicle for the youth to have access to. They wanted iPad Air enclosures that would protect against abuse and theft, stands that were lockable with cable locks, and for the entire solution to be elegant in design.

The Solution | The **Space 360 All in One Bundle** combines all the advantages of the Space Enclosure and Security Lock, with an all-in-one counter-top bracket, making it a perfect all-inclusive iPad Air security kiosk. It is made out of high grade aluminum, it rotates and swivels, and can be viewed in landscape or portrait. The enclosure includes padding for the protection of the iPad Air. It can be secured while being charged, and can accommodate any universal cable lock using a built in security slot.

Customer Feedback

"Maclocks Space iPad Enclosure stands are perfect, beautifully designed, so functional and incredibly secure. Installing them was really easy and we are really grateful to Maclocks for their support, we love the iPad stands on the BIOS van".
